## DETAILED ACTION

Acknowledgment is made of the preliminary amendment received on 6/27/03 amending the claims. Claim 36 is currently pending.

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 36 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 18 of U.S. Patent No. 6,371,374. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant application, as does the patent, teaches a method of assembling an illumination package for an optical reader including the steps of:

providing a support;

positioning an illumination source to said support;

adjusting a position of an optical element relative to said illumination source; and

Art Unit: 2876

fixing a position of said optical element relative to said illumination source when a desired position is attained.

The patent lacks the teaching of the step of then securing the optical element to the support.

One of ordinary skill in the art would have readily recognized that finally securing the optical element after achieving a desired position for the optical element would have been beneficial for helping eliminate the need of the disposal or repair of an entire optical reader due to the lens being misaligned during optical reader assembly. Therefore, it would have been obvious, to modify the patent with the step of securing the optical element to help avoid repair costs.

***Allowable Subject Matter***

3. Claim 36 is allowable upon the timely submission of a terminal disclaimer.

4. The following is a statement of reasons for the indication of allowable subject matter: although a method having the steps of providing a support, positioning a light source, adjustably positioning a lens is known within the art, the prior art of record, particularly Krichever (US 5,254,844), fails to teach or fairly suggest either alone or in combination thereof a further step of securing the optical element to the forward receiving surface.

Art Unit: 2876

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
